GRANITE ONE STEP POLISH & RESTORER

GRANITE ONE STEP will restore a rich color and deep luster to any color granite floor, including black. Use for maintenance and the restoration of light traffic areas.

DESCRIPTION:

GRANITE ONE STEP is a polishing compound that can be used on any color granite with minor wear pattern to produce a deep beautiful luster. Easy to use. Works well with regular steel wool pads.

DIRECTIONS:

1. Apply 1 oz. of GRANITE ONE STEP polishing compound to polish 12 to 18 square feet of granite.
2. Buff with a regular steel wool pad on a slow speed machine (175 to 300 RPM) until completely dry and smearing has disappeared. There may be need to repeat once or twice depending on initial condition of floor surface. After desired look is achieved, move to next area.
3. To remove any swirls or polish left on the floor, buff entire area with new regular steel wool pad on the low speed machine.

Note: In our testing we have been able to produce good results by using natural hair pads in the application and polishing of granite floors. The final buffing must be done with a steel wool pad to produce the best luster. The use of a high quality steel wool pad produces the best results.

May cause skin, eye and mucous membrane irritation. Wash thoroughly after handling. For eye contact, flush with water for 15 minutes, if ingested, drink several glasses of water and promptly call a physician.
