HERTRO BOND

DESCRIPTION: *Hertro-Bond* is a liquid additive used to strengthen grout applications and overcome the difficulty of bonding a repair to the original surface. When used as an over grout, the patch may be drawn to a feather edge and the surface matched to the surrounding area. It accelerates the initial set of grout and is excellent for use in regrouting ceramic tile.

DIRECTIONS: Brush away any loose surface particles with wire brush.
Mix 1 part *Hertro-Bond* with 1 part water.
Using the resulting mixture, pre-wet the area just ahead of the repair and do not allow to dry.
Use the mixture also as the mixing liquid to bring dry material to the proper working consistency, then apply as desired.
The surface may be steel troweled, broomed or rubbed to match the existing or surrounding area.
