

HERTRON STONE SYSTEMS

VitreGel

Polishing System

VG/POLISH

Polishing Compound for

Marble & Terrazzo Floors

DIRECTIONS FOR USE:

Apply only to a thoroughly clean floor.

Take care that all baseboards, carpet or other surrounding surfaces are properly taped and protected from overspray.

Pour approximately 1 quart of water onto a 6'x6' area.

In the center, put 1 ounce of *Vitre-Gel Polish*.

IMMEDIATELY place a hogs hair pad under a low speed buffer directly on that ounce and begin polishing with straight passes side to side, being sure to move over each tile twice.

Turn then at a right angle and continue polishing in straight strokes perpendicular to the first, again being sure to move over each tile twice.

After 3 minutes have elapsed, vacuum up the liquid.

Move to an adjoining area and repeat this process until the entire floor has been polished.
